

ZAP CELLULITE

When it comes to the war on cellulite, Ultratone is fully charged up and ready to help you beat it.

Unlike creams that promise the earth only to sink into the skin without a trace, Ultratone works from the inside out for smoother, tighter skin.

Ultratone's anti-cellulite treatment works by exercising the muscles of affected areas quickly and vigorously. Each muscle will contract and relax up to 900 times per hour - far greater than anything you could achieve in the same time at the gym!

As a result of such a targeted and vigorous workout - special Ultratone pads are placed directly onto the affected area - your body is able to break up and drain away the fatty deposits that produce the much-hated 'orange peel' effect.

Cellulite may be unavoidable but Ultratone will help to get it under control while toning your thighs and bottom at the same time!
